Air-Cooled Jumper Order Sheet

Air-Cooled Jumper cables are flexible, high conductivity copper conductors with insulative sleeves. They are made in various lengths and lug configurations to fit your needs.

**Holes are 17/32" unless specified otherwise

Cable Types	
Standard	The standard weld cable is suitable for most applications and is commonly found on standard press type, rocker arm or custom welding machines.
Xtra Flex	The Xtra Flex Cable is less rigid and has higher a higher cooling rate than standard cables due to extra spacing between the wire strands. The cable is recommended for robotic applications where the weld cable may be twisted or curled during operation.

*Water Cooled and Kickless Cables are available upon request
